Green Space

Brussels, the capital region of Belgium, consists of 19 municipal districts. It is a major hub for both Flemish (Dutch speaking) and Wallonian (French speaking) citizens, who are typically divided into the Northern and Southern poles of the nation and quite frequently at political and cultural odds.

It is poetic that the capital city of such a divided nation also serves as the primary federal location of the European Union, serving as the seat of the European Commision, Council of Europe, and the European Parliament.
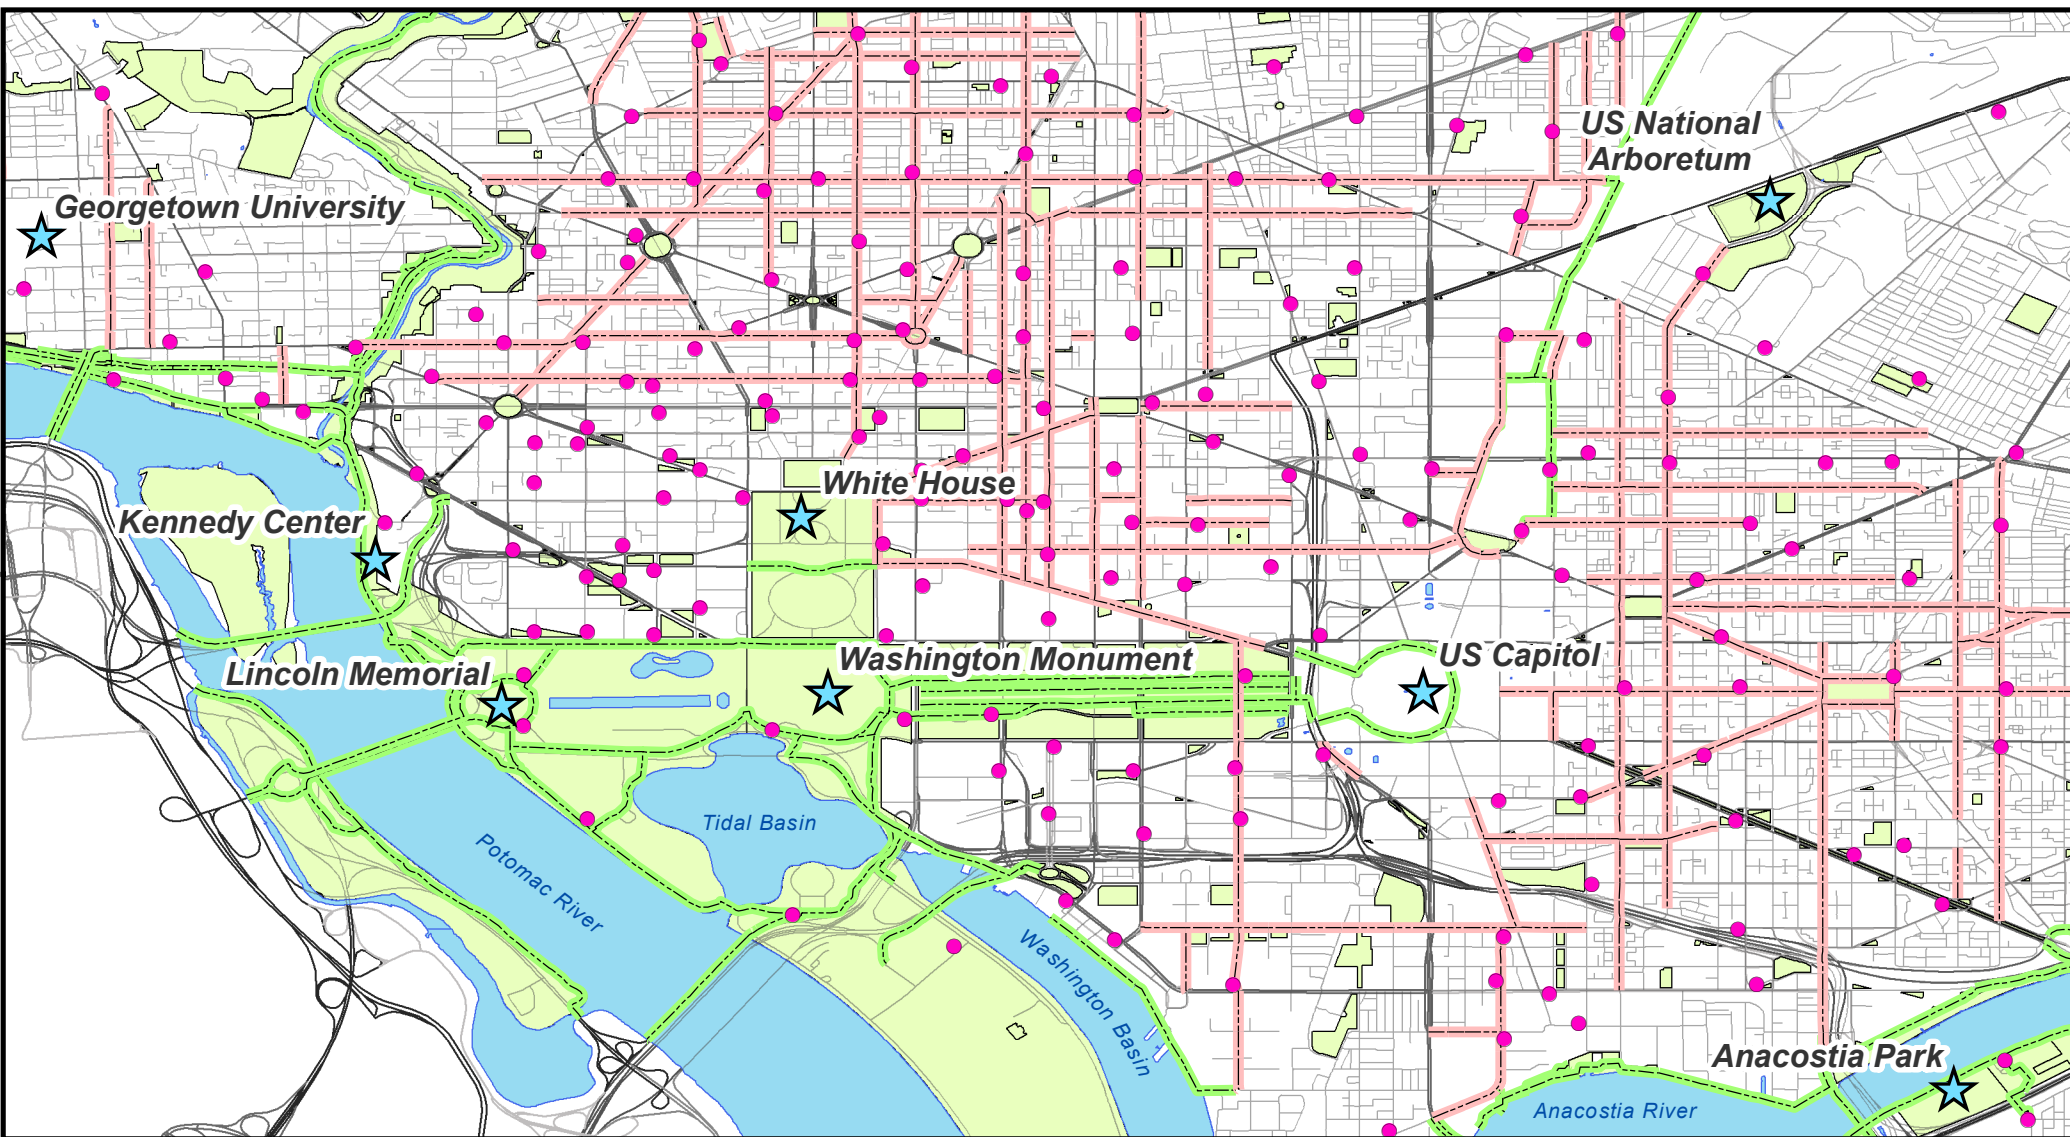

Ironically, Brussel's long history of hosting international institutions is due to lack of agreement between Europe's great powers rather than unionist sentiments. Belgium was considered a weak (and off-limits) central location within the European power block.

Washington, D.C. is the capital city of the United States of America. The city is home to the U.S. President, houses both the legislative and judicial branches of the government, and plays host to the many foreign ambassadors residing within the city limits. In addition to containing numerous political dignitaries, the city is also a center of discovery for visitors seeking to learn about American history via the Smithsonian museum system.

Due to its unique topography, Colorado's population density is greatest in counties just to the East of the Rocky Mountains. Additionally, all of Colorado's major cities lie in the foothill region east of the Rockies, showing that there is truth in the old Coloradan saying: "If you need to figure out which way is 'West,' just look towards the mountains!"

Cades Cove

This trail is located in a large isolated valley. Considered to be one of the most popular destinations in the park as well as one of the best places to see wildlife. Some of the sites include 3 churches, a working grist mill, barns, and log cabins.

Chimney Tops Trail
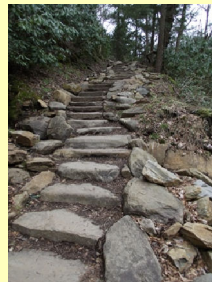

The trail goes over many wooden bridges and stone steps to lead to one of the peak best views in the park. One of the most popular hikes in spring and summer due to its abundance of wildflowers as well as its cool temperatures.

Alum Cave Trail
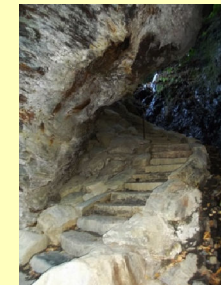

This trial was once used as an Epson salt mine in the early 1800's. The path goes up the side of a mountain with handmade wooden and stone steps. The path then leads to a large open cave system with breathtaking views.

Atlanta BeltLine
Where Atlanta Comes Together

About the Project

The BeltLine is a former railway corridor around the core of Atlanta, GA, under development in stages as a multi-use trail. Some portions are already complete, while others are still in a rough state but hikeable. Using existing rail track easements, the BeltLine is designed to improve transportation, add green space, and promote redevelopment. There are longer-term visions for streetcar or light-rail lines along all or parts of the corridor.

The Southeast region of the National Parks in the United States consists of 9 states (AL, FL, GA, KY, LA, MS, NC, SC, TN) and territories (Puerto Rico and the Virgin Islands) and has 60 National Parks. The Great Smoky Mountains (GRSM) NP is located in the Great Smoky Mountains and the Blue Ridge Mountains. It is the most visited National Park in the US with over 11 million visitors annually. The 2 biggest visitor centers in the park are Sugarlands near Gatlinburg, TN and Oconaluftee near Cherokee, NC. There are 850 miles of trails and unpaved roads. Other activities to do in the park besides hiking include fishing, horseback riding, and biking.

N

From: What are the 7
Continents- Facts
About South America

South America was named
after the Italian explorer
Amerigo Vespucci.
Although the continent was
first discovered by
Columbus, it was Amerigo
who first proved that
it wasn't part of the
Far East (as postulated
by Columbus). He was
therefore given the
honor of having the
continent named after him.

Raleigh is the state capital of North Carolina and the seat for Wake County. It is the second largest city in North Carolina behind Charlotte. Also known as the "City of Oaks," Raleigh earns this name because of the numerous oak trees that line streets within downtown. Combined with two other cities in the area, Chapel Hill and Durham, these three cities comprise the area often referred to as the "Triangle" and is a major economic hub for the state.

For outdoors enthusiasts, Washington is an ideal state for exploration with its wide range of ecoregions, from the rainy Northwest Coast to the dry Columbia Plateau. An ecoregion is an area of land that reflects broad ecological patterns. Washington's western ecoregions are characterized by wetter climates and temperate rainforests. Moving eastward, the ecoregions become more desert-like as well as drier and hotter, with landscapes cut by rivers. Washington's diverse ecoregions are home to number of National Parks. Olympic National Park can be found on the Northwest Coast, with its alpine meadows and lush rainforests. Further inland, Nez Perce National Historical Park features a drier landscape with grasslands.

Going Car-Less in the City of Traffic: How Poverty Affects Mobility in Atlanta

Atlanta's reputation for being a car-dominated city precedes itself. Most residents cannot imagine life without a car. However, many large pockets of the city are made up of households without a single car, generally due to poverty. Owning a car is expensive, with one study showing that the state is one of the most expensive places in the US to own a car. The cost of insurance, repair and gasoline adds up to an average $2,408 per Georgian (and this is not including purchase price for cars and other external costs such as parking). Although Atlanta offers some public transportation, this map shows huge pockets of the population that are stuck without a car and without a major mode of public transportation (MARTA train line). This limits their ability to find a job outside of their immediate community and make the money they need to get out of the cycle of poverty.

Parcels   **Bikeability Index**   0   1   2   3   4

Bikeability score describes the convenience and ability for an area to support a lifestyle centered around cycling as a primary mode of transportation. Index takes multiple factors into account such as: proximity to downtown Denver, distance from business development, access to biking infrastructure, and quality of adjacent infrastructure.This index can be used to identify suitable areas to work or live for those interested in a cycling lifestyle.

For those with a green finger, Atlanta is a great place to live as it is home to a multitude of community gardens, greenhouses and orchards. The community gardens can be found all over the city in the various Atlanta neighborhoods. The neighborhoods closest to downtown Atlanta are especially plentiful with gardens. The photo below shows a garden in the historic Westview neighborhood, which is home to a total of four gardens.

China: Household Consumption by Provience

The cost of living in China has been known as relative low compare to other major countries. However, over the past decade, the cost living in China has been dramatically increased, especially in the large cities. The cost of living in China's first-tier cities is now among the highest in the world.

This Household Consumption Expenditure by Province map shows the comparison of cost of living among proviences.

Transit Use in D.C.

In Calendar Year 2017, 228,209,811 people rode the D.C Metro system (Federal Transit Authority). According to the U.S Census 2006, D.C has the second highest percentage of public transit commuters in the U.S.

Voting in D.C.

Because the District of Columbia is a special federal district, not a state, D.C residents do not have any representation in the United States Senate. A delegate represents D.C in the House of Representatives and cannot vote on the House floor, but can vote on congressional committees and procedural matters. The district is provided the same amount of electoral votes as the least populous state in the US during the presidential election.

Railroads in Europe by Country

Map by Tyler Curl 12.7.2018

Shown here are three maps showing the coverage of railroad infrastructure across Europe. While Russia is considered a European country, it is excluded as its massive size makes it an outlier. Likewise, Iceland is excluded as it has no railroads. The bottom left frame shows the rails throughout the continent. The bottom right frame shows the total length of rail per country in kilometers. The top right map frame shows the total number of rails that pass through each country.

As the number of internally displaced persons (IDPs) in Syria nears 7 million, conditions for these people continue to worsen. IDP camps across the country grow more crowded with each stream of arrivals, spreading scarce resources ever thinner. One invaluable resource for these camps is potable water, as shelling and conflict have destroyed much of the country's plumbing infrastructure. This map ranks IDP camps based on proximity to large rivers providing a consistent (year-round) water supply, which aids in boosting standards of living and sanitation for all within the camp.

Percentage Born Low Birthweight by State in 2016

States

Percentage Born Low Birthweight

- 5.9% - 7.2%
- 7.2% - 8.0%
- 8.0% - 8.8%
- 8.8% - 9.8%
- 9.8% - 11.5%

According to the University of Rochester Medical Center: Low birthweight refers to babies who are born weighing < 5.5 lbs while an average baby usually weighs about 8 lbs. A low-birthweight baby can be healthy, but the baby can also have many serious health problems. This risk is best prevented through regular prenatal care.
